

# HEPATITIS B: ARE YOU AT RISK?

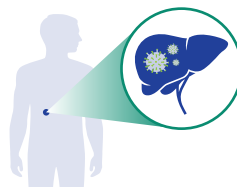

## HEPATITIS B IS A SERIOUS & DEADLY DISEASE

Hepatitis B virus infects people of all ages & as many as

**2.2M people**

in the US are chronically infected

**Up to 40%**

of chronic infections lead to cirrhosis, liver failure, and liver cancer, which may lead to death

## HEPATITIS B IS EASILY SPREAD

Hepatitis B is

**50 to 100X more**

infectious than HIV and can live

outside the body for **7+ days**

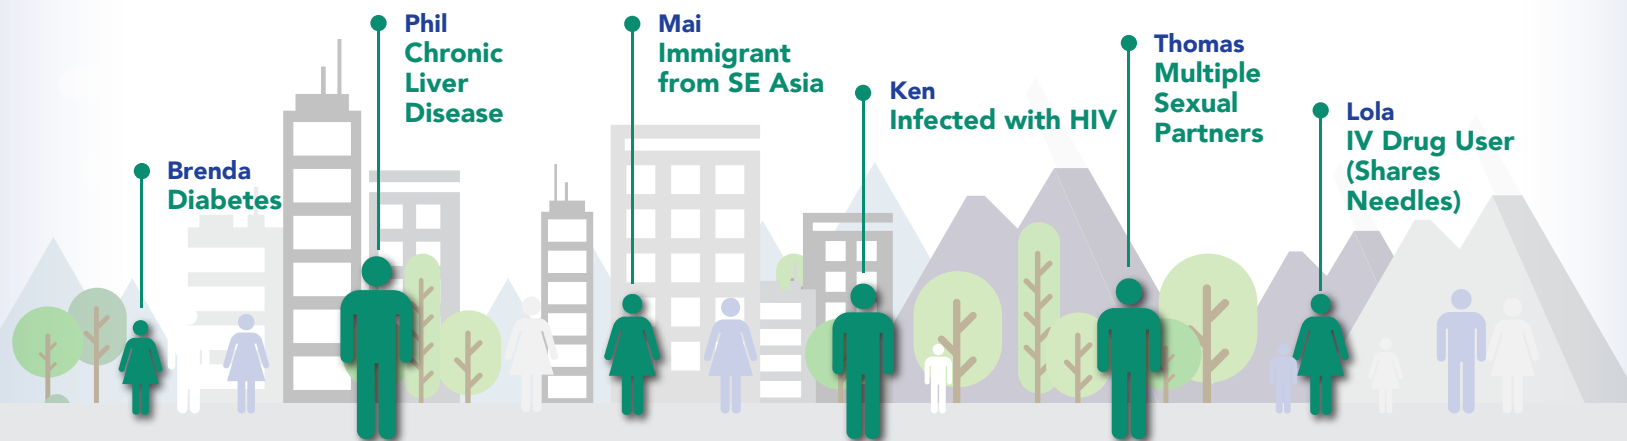

and still cause infection

**2/3**

of those living with chronic hepatitis B do not know they are infected but can still spread the virus to others

## MANY ADULTS ARE AT RISK

## SAFE & EFFECTIVE VACCINES ARE AVAILABLE

**Only 25% of US adults get vaccinated**

against hepatitis B as recommended by the Centers for Disease Control & Prevention (CDC)

**TALK TO A HEALTHCARE PROFESSIONAL ABOUT VACCINATION TO HELP PROTECT YOURSELF AGAINST HEPATITIS B**
